AB - J53050229 Cement compsn. is composed of 60-95 wt.% Portland cement and 4 - 5 wt.% silica gel or metakaolin, being mixed with fibres, aggregate and additives as required. Compsns. are obtd. by adding to the material thus obtd. 1-20 wt.% glass fibres.  
- Silica gel of grain size of ca. 40000 cm<sup>2</sup>/g is pref. used and metakaolin of 10000-12000 cm<sup>2</sup>/g is used to develop the same effect as natural pozzolan.  
- Cement material can prevent efflorescent, decreases exothermic heat, further prevents deterioration of glass fibres, and can be cured at ambient temp. or by steam.
